Vespa feed-client shutdown

Implementation record for the Java shutdown contribution.
This document describes ownership tracking, abort escalation, cleanup sequencing,
and the failure modes V01-V16 identified during shutdown review.

Design decisions include a shared lifecycle monitor, tracked operations, one cleanup
worker, and read-only shutdown handles so observers do not cancel shared shutdown.

Review and rerun: mvn -pl vespa-feed-client-api,vespa-feed-client,vespa-feed-client-cli -am test
